Programs for complex drawings can utilize PDE (paint to draw) and DCC (draw to component) which allows the user to apply a paint or line set to the component and be able to see the result. With the growing popularity of the Internet, people started to use a feature named markup. This allows a user to create a button in a picture and put any icon they want onto that button. When you click the button, it will create the markup into the drawing. The same can be done with a shape. You can create a shape of a plug, put in some color, set some material and apply and export. The export feature allows you to create a DWG, an AutoCAD drawing format used widely in the CAD industry. Autodesk also makes a feature to use vectors to build up into actual 3D objects.
